

Reflet ㄹㄿㄿ

Concept

Lightness

Considering the easiness in handling for everyday use, this series of bowls is particular about its lightness. It reduces the work load in all situations at home and foodservice operations.

Shining Glass

"Reflet" means "shine/reflection" in French. The geometric pattern fits into various dining scenes. It complements the dishes while having the brilliance and luxury peculiar to glass.

Light Weighting

Compared to our conventional product "Gracieux" series (same shape and pattern as Reflet), the product weight has been reduced by about 20%.

Reduction of Work Load

◆ At Home & Foodservice Operations

Reduce the workload in all situations

◆ Transportation & Packing

Reduces the burden on transport and packing workers by reducing the average weight per carton by 2.64 kg (compared to "Gracieux" series)

Environmentally friendly

◆ Reduction of Raw Fuel Consumption

	Raw Material	Fuel
*Annual Reduction	8,165 (kg)	1,367 (ℓ)

* Compared with "Gracieux" series (As per 100,000 pieces)

◆ Contribute to Goal 12 of the 17 international goals of SDGs

* SDGs: Sustainable Development Goals adopted at the 2015 United Nations Summit

Goal 12:
Ensuring sustainable production and consumption form

Contributing to the sustainable management and efficient use of natural resources by reducing raw material and fuel usage during production due to product weight reduction

Geometric Pattern

We have devised various ideas to simultaneously realize the brilliance of glass, the softness that complements the dishes, and the usability.

◆ Calculated Brilliance

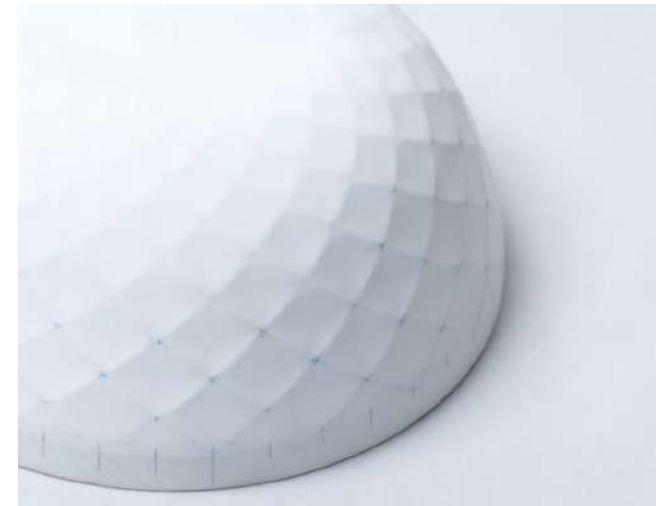

The geometric pattern in which diamonds are lined up regularly was selected as a pattern that does not impair luxury and presence even if the wall thickness is designed to be thin for weight reduction. By raising the center of each diamond in a round shape, we aimed for a glass lens effect and devised a way to bring out the brilliance from a small wall thickness.

◆ Soft Pattern

In order to express the light and soft shine that spreads softly from the center of the bowl, we dared to produce a mold using a hand-carved plaster prototype instead of 3D data.

◆ Easy to Use

As for the unevenness, we paid close attention so that the sponge and cloth would not get caught when washing the inside and the liquid would not collect in the groove of the pattern when serving the dish.

Variations

There is a wide range of items that can be used for salads, noodle menus, desserts, etc., and are useful in various dining scenes.

 GOOD DESIGN AWARD

REFLET is a new line specifically named for glassware bowls of which design concept is particular about "a gentle touch in your hands," considering the easiness in washing, sorting and storing in household and foodservice uses. Its simple shape and shining geometric patterns unique to glass can enhance Western, Asian or any other cuisine and be a best fit for a variety of dining scenes. In recognition of these outstanding features, REFLET won the 2019 Good Design Award.
